Project Design and Evaluation for Restoration

Workshop Overview

Have you ever implemented a restoration project that didn't quite meet its intended outcomes? (Be honest!) This interactive, full-day workshop offers restoration practitioners valuable knowledge, skills, and tools to enhance your ability to design targeted projects that have a greater chance of achieving success. The workshop is not intended to present basic components of restoration planning, but rather a planning framework, using the logic model, that will increase project success. The approach is applicable to any habitat type. Space is limited to 30 people.

- *How do I measure the effectiveness of my restoration efforts?*
- *How do I increase the chance my projects will have the expected impact and reach the right audience?*

If you have ever asked yourself these questions, this is the course for you!

Topics covered

- Adaptive Management
- Situation Assessment
- Project Design: Logic Models
- Project Design: Goals & Objectives
- Project Design: Performance Measures
- Project Implementation
- Evaluation
- Discussion of Application to Participant Projects

June 6, 2013

8:30am-5pm $20

lunch provided

Mather Auditorium
Wells Reserve

Target Audience

- Restoration practitioners
- Land managers
- Resource professionals
- Local officials & Municipal boards
- Environmental organizations
